# Clicker Books

Clicker Books is an engaging book creation tool for elementary school students across the ability spectrum. As children create their own books, they are offered a full range of literacy support tools to enable them to achieve success.

## Child-friendly book making

Students use the child-friendly tools to add pictures, text, and sound to create fantastic-looking books. Customizable reading and writing support is included to help children of all abilities achieve success. In addition, you can put together pre-prepared books for students to complete - these may contain word or picture banks to support children as they create their books.

## Customizable writing support

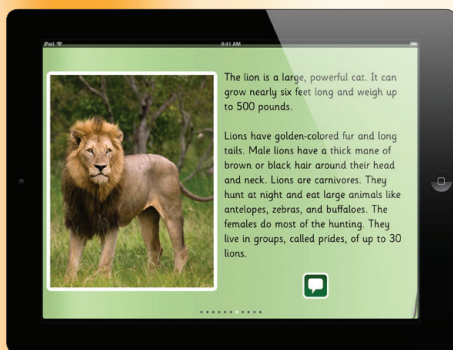

As they write, children benefit from key Clicker support features including realistic speech feedback, intelligent word prediction, word banks and a talking spellchecker. The appropriate level of support can be customized to enable all students to create their own books independently.

## Flexible illustration tools

Clicker Books enables children to illustrate their work in a variety of ways. Students can upload images from the camera roll, use the webcam to take a photo, or create their own pictures using the integrated painting tools. You can paint on top of any images too.

## Teacher-friendly tools

As well as being a wonderful app for helping children to create their own books, Clicker Books provides you with an easy way to create personalized reading books for your learners. Modify the subject matter and comprehension level to students' particular learning needs and objectives.

## Designed with the classroom in mind

As with all of our products, we have put our many years of experience in the classroom and education software development to good use when designing Clicker Books! Features like the integrated Sassoon font and lower case keyboard create an age-appropriate, engaging environment for students to work in. When you're ready, share books as a PDF via email or Dropbox, or print to any Airprint-compatible printer.

## Free resources

Access ready-made book making templates and topic-specific reading books created by our curriculum team and searchable within the app. New resources are added regularly to our LearningGrids site. ([www.learninggrids.com](http://www.learninggrids.com)).

Please see the App Store for latest device specification.
